- GameObject alternateCamera
- MonoBehaviour mainPlayerController
- MonoBehaviour alternateController
- KeyCode switchKey = KeyCode.F
- bool hidePlayer = true

4.1.1 Подробное описание

Manages switching between different cameras and control systems.

This component allows toggling between a main camera/controller and an alternate camera/controller when the player enters a trigger zone and presses a designated key

См. определение в файле CameraSwitchController.cs строка 10

4.1.2 Данные класса

4.1.2.1 alternateCamera

 ${\bf Game Object\ Camera Switch Trigger. alternate Camera}$

См. определение в файле CameraSwitchController.cs строка 15

4.1.2.2 alternateController

 $MonoBehaviour\ Camera Switch Trigger. alternate Controller$

См. определение в файле CameraSwitchController.cs строка 17

4.1.2.3 hidePlayer

 $bool\ Camera Switch Trigger.hide Player = true$

См. определение в файле CameraSwitchController.cs строка 21

4.1.2.4 mainCamera

GameObject CameraSwitchTrigger.mainCamera

См. определение в файле CameraSwitchController.cs строка 14

4.2 Класс FPSController 9

4.1.2.5 mainPlayerController

 $MonoBehaviour\ Camera Switch Trigger. main Player Controller$

См. определение в файле CameraSwitchController.cs строка 16

4.1.2.6 playerObject

 ${\bf Game Object\ Camera Switch Trigger. player Object}$

См. определение в файле CameraSwitchController.cs строка 13

4.1.2.7 switchKey

 $KeyCode\ CameraSwitchTrigger.switchKey\ =\ KeyCode.F$

См. определение в файле CameraSwitchController.cs строка 20

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/Scripts/Camera Switch Controller.cs$

4.2 Kласс FPSController

First Person Shooter character controller.

Граф наследования:FPSController:

Граф связей класса FPSController:

Открытые атрибуты

- float moveSpeed = 5f
- float mouseSensitivity = 2f
- Transform cameraTransform

4.2.1 Подробное описание

First Person Shooter character controller.

This class handles movement and camera control for a first-person character

См. определение в файле FPSController.cs строка 8

4.2.2 Данные класса

4.2.2.1 cameraTransform

Transform FPSController.cameraTransform

См. определение в файле FPSController.cs строка 12

4.2.2.2 mouseSensitivity

 $float\ FPSController.mouseSensitivity\,=\,2f$

См. определение в файле FPSController.cs строка 11

4.2.2.3 moveSpeed

 $float\ FPSController.moveSpeed = 5f$

См. определение в файле FPSController.cs строка 10

Объявления и описания членов класса находятся в файле:

• Assets/Scripts/FPSController.cs

4.3 Класс LoadSceneOnTrigger

Loads a new scene when triggered.

Граф наследования:LoadSceneOnTrigger:

Граф связей класса LoadSceneOnTrigger:

4.3.1 Подробное описание

Loads a new scene when triggered.

This component loads a specified scene when a ball enters its trigger collider

См. определение в файле LoadSceneOnTrigger.cs строка 9

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/Scripts/LoadSceneOnTrigger.cs$

4.4 Класс Readme

ScriptableObject for displaying readme information in the Unity Editor.

Граф наследования:Readme:

Граф связей класса Readme:

Классы

 \bullet class Section

Represents a section of content in the readme.

Открытые атрибуты

- Texture2D icon
- string title
- Section[] sections
- bool loadedLayout

4.4 Класс Readme

4.4.1 Подробное описание

ScriptableObject for displaying readme information in the Unity Editor.

This class provides a structured way to create and display tutorial or documentation information within the Unity Editor interface

См. определение в файле Readme.cs строка 10

4.4.2 Данные класса

4.4.2.1 icon

Texture2D Readme.icon

См. определение в файле Readme.cs строка 12

4.4.2.2 loadedLayout

bool Readme.loadedLayout

См. определение в файле Readme.cs строка 15

4.4.2.3 sections

Section [] Readme.sections

См. определение в файле Readme.cs строка 14

4.4.2.4 title

string Readme.title

См. определение в файле Readme.cs строка 13

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/TutorialInfo/Scripts/Readme.cs$

4.5 Класс ReadmeEditor

Custom editor for the Readme ScriptableObject.

Граф наследования:ReadmeEditor:

Граф связей класса ReadmeEditor:

Открытые члены

• override void OnInspectorGUI ()

Renders the main inspector GUI.

Защищенные члены

• override void OnHeaderGUI ()

Customizes the header section of the inspector.

4.5.1 Подробное описание

Custom editor for the Readme ScriptableObject.

This editor automatically displays the readme when the project is opened and provides a custom inspector UI for displaying the readme content

См. определение в файле ReadmeEditor.cs строка 17

4.5.2 Методы

4.5.2.1 OnHeaderGUI()

override void ReadmeEditor.OnHeaderGUI () [protected]

Customizes the header section of the inspector.

Displays the readme icon and title

См. определение в файле ReadmeEditor.cs строка 132

4.5.2.2 OnInspectorGUI()

override void ReadmeEditor.OnInspectorGUI ()

Renders the main inspector GUI.

Displays all sections of the readme with their headings, text, and links

См. определение в файле ReadmeEditor.cs строка 165

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/TutorialInfo/Scripts/Editor/ReadmeEditor.cs \\$

4.6 Kласс RotateOnXZWithKeys

Enables keyboard-controlled rotation of an object.

 Γ раф наследования: RotateOnXZWithKeys:

Граф связей класса RotateOnXZWithKeys:

Открытые атрибуты

• float rotation Speed = 100f

4.6.1 Подробное описание

Enables keyboard-controlled rotation of an object.

This component allows rotating an object around its X, Y, and Z axes using keyboard input

См. определение в файле RotateOnXZWithKeys.cs строка 8

4.6.2 Данные класса

4.6.2.1 rotationSpeed

 $float\ RotateOnXZWithKeys.rotationSpeed\ =\ 100f$

См. определение в файле RotateOnXZWithKeys.cs строка 10

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/Scripts/RotateOnXZWithKeys.cs$

4.7 Класс Readme.Section

Represents a section of content in the readme.

Открытые атрибуты

- string heading
- string text
- string linkText
- string url

4.7 Класс Readme.Section 17

4.7.1 Подробное описание

Represents a section of content in the readme.

Each section can contain a heading, text content, and an optional link

См. определение в файле Readme.cs строка 23

4.7.2 Данные класса

4.7.2.1 heading

string Readme.Section.heading

См. определение в файле Readme.cs строка 25

4.7.2.2 link Text

string Readme.Section.linkText

См. определение в файле Readme.cs строка 27

4.7.2.3 text

string Readme.Section.text

См. определение в файле Readme.cs строка 26

4.7.2.4 url

string Readme.Section.url

См. определение в файле Readme.cs строка 28

Объявления и описания членов класса находятся в файле:

• Assets/TutorialInfo/Scripts/Readme.cs

4.8 Kласс ShowTMPTextOnTrigger

Controls the visibility of TextMeshPro text based on player position and view angle.

Граф наследования:ShowTMPTextOnTrigger:

Граф связей класса ShowTMPTextOnTrigger:

4.8.1 Подробное описание

Controls the visibility of TextMeshPro text based on player position and view angle.

This component shows/hides a TextMeshPro text element when the player enters a trigger and is looking at the object within a specified angle threshold

См. определение в файле ShowCanvasOnTrigger.cs строка 10

Объявления и описания членов класса находятся в файле:

 $\bullet \ Assets/Scripts/Show Canvas On Trigger.cs$
